

DIGITAL AUDIO/VIDEO RECORDER

X3-DVR

The X3-DVR is the next generation video and audio data storage solution for airborne applications.

By utilizing solid-state flash memory, the X3-DVR eliminates the need for bulky VHS recording equipment. With simple one-key operation, map data, video feeds and other sources are stored directly to compact flash for later review in the office, classroom or courtroom. Seamlessly integrated with the UltiChart™ tactical mapping system, the X3-DVR is a cost-effective solution for your in-flight data recording needs.

The X3-DVR can be installed as a stand-alone unit, or can be integrated with the AeroComputers digital map system. In integrated mode, DVR status such as recording time, and remaining disk space can be viewed within the moving map application. In-flight replay is also possible when the DVR is used in conjunction with an AeroComputers moving map.

DVR Status Box

PRODUCT SPECIFICATIONS:

- Fully-integrated with UltiChart™ tactical mapping system
- MPEG-2 encoding resulting in 100/1 compression
- Supports any NTSC or PAL video source
- Supports stereo in/out or dual mono in/out
- Solid state digital video/audio recorder utilizing compact flash (CF) media
- 30-minute record time for each GB of flash storage
- Weight: 2.2 lbs
- Dimensions: 4.78" x 5.32" x 3.29"

X3-DVR
audio/video recorder

- ✓ SOLID STATE RECORDING
- ✓ VIEWABLE WITH ANY MEDIA PLAYER
- ✓ ONE-KEY OPERATION
- ✓ REDUCED WEIGHT
- ✓ RUGGED ENCLOSURE
- ✓ INFINITELY EXPANDABLE
- ✓ QUICK DATA TRANSFER VIA COMPACT FLASH

AeroComputers, Inc., based in Oxnard, California, has been designing, building and marketing computer systems that manage tactical operations for airborne applications since 1993. Currently employed by over 150 law enforcement, fire, military and other public safety agencies worldwide, AeroComputers is the industry leader in providing mission management systems that integrate GPS-based moving maps, image collection and transmission, illumination and data storage.
